

ReOS

Revival Operating System

Essential screens

An AI revenue-recovery control plane for Razorpay merchants

REVIVAL OPERATING SYSTEM

Recover more revenue. Prove every rupee.

The revenue-recovery control plane for Razorpay merchants — reconcile against live state, act inside a policy you own, and never move a rupee you can't verify.

-  Reconciled — no double charges, ever
-  Bounded AI that drafts, never decides money
-  Append-only ledger, full audit trail

Replay & Experiment Studio

Run a batch through the same production pipeline and watch the six scripted moments, live.

Run configuration

Holdout percentage: 30%

Fixtures span all five lanes, including the stale, duplicate, and out-of-order events.

Run Replay

Gross recovered

Incremental vs holdout

RECOVERED

₹11,998

verified captures

NET

₹2,999

after ₹8,999 refunds

MOMENTS

6/6

processed

Run log			
1	Stale failure webhook	no-op	pay_STALE001
A 'payment.failed' webhook arrived, but re-reading live state shows the payment is already captured. Reconcile: live 'captured' vs webhook 'failed' → already_paid. No action, no double charge.			
2	Duplicate & out-of-order	blocked	pay_STALE001
A duplicate idempotencyKey and an out-of-order delivery arrive. Dedupe drops the duplicate; reconcile orders by orderIndex. idempotencyKey 'wh_pf_001' already seen → deduped (no second case, no second charge). Out-of-order pair sorted by orderIndex.			
3	Consented cart recovery	recovered	order_AC101
Consent is on file, so a calm reminder is sent. The customer completes checkout and we verify the paid order. Live state moved 'created' → 'paid'. Recovery attributed only after the verified capture.			₹2,999
4	Retry budget reached	stopped	sub_STOP201
A subscription has failed on all 3 daily retries (T+3). The policy stop rule halts it instead of trying again. checkRetryBudget(3, 3) → allowed=false (retry_budget_exhausted). Subscription halted.			
5	High-value escalation	escalated	inv_HV301

Agents

Seven roles — three use the LLM, three are deterministic — each with a fixed tool allowlist and an abstention rule.

Orchestrator

DETERMINISTIC

Route each verified case to its lane and playbook. Read-only.

TOOL ALLOWLIST

- razorpay.getPaymentState ×
- razorpay.getOrderState ×
- razorpay.getSubscriptionState ×
- razorpay.getInvoiceState ×
- razorpay.getEntityState ×

add a tool... +

Abstains: Abstain and escalate when the entity, its current state, or consent cannot be determined.

RECENT DECISIONS

- ✓ razorpay.getPaymentState · pay_STALE001 3d

Classifier

USES AI

Turn status + error code into a failure class, reason code, and confidence.

TOOL ALLOWLIST

- ai.classify ×

add a tool... +

Abstains: Abstain (confidence ≤ 0.3) on an unrecognisable signal; escalate.

RECENT DECISIONS

No recent tool calls.

Communicator

USES AI

Draft a consented, on-brand, non-manipulative message and (only then) send it.

TOOL ALLOWLIST

- ai.draftMessage ×
- razorpay.sendMessage ×
- razorpay.sendPaymentLink ×

add a tool... +

Abstains: Never send without consent or if the dark-pattern screen fails; abstain instead.

RECENT DECISIONS

- ✗ razorpay.sendMessage · order_AC115 5d
- ✗ razorpay.sendMessage · disp_DR401 6d

Receivables Reader

USES AI

Extract reply intent, promise-to-pay date, and dispute reason from a customer reply.

TOOL ALLOWLIST

- ai.extractReply ×

add a tool... +

Abstains: Abstain on low-confidence extraction; route to a human.

RECENT DECISIONS

No recent tool calls.
